Disclaimer and Forward-Looking Statements

This presentation contains forward looking statements that are based on management's beliefs and assumptions and on information currently available to management of Kyverna Therapeutics, Inc. ("Kyverna", "we", "our," or the "Company"). All statements other than statements of historical facts contained in this presentation are forward looking statements. Forward looking statements include, but are not limited to, statements concerning: the Company's future results of operations and financial position, business strategy, drug candidates, planned preclinical studies and clinical trials, results of preclinical studies and named patient activities, ongoing clinical trials, research and development costs, plans for manufacturing, regulatory approvals, timing and likelihood of success, as well as plans and objectives of management for future operations. These forward looking statements are subject to risks and uncertainties, including the factors described under the Risk Factors section of the Company's most recent Annual Report on Form 10-K and Quarterly Reports on Form 10-Q that the Company has filed or may subsequently file with the SEC. Actual results could differ materially and adversely from those anticipated or implied in the forward looking statements. When evaluating Kyverna's business and prospects, careful consideration should be given to these risks and uncertainties. These statements speak only as of the date of this presentation, and Kyverna undertakes no obligation to update or revise these statements.

This presentation also contains estimates made by independent parties relating to industry market size and other data. These estimates involve a number of assumptions and limitations and you are cautioned not to give undue weight on such estimates. We have not independently verified the accuracy or completeness of such information and we do not take any responsibility with the accuracy or completeness of such information.

This presentation contains references to trademarks and marks belonging to other entities. Solely for convenience, trademarks and trade names referred to in this presentation may appear without the ® or TM symbols, but such references are not intended to indicate, in any way, that the applicable licensor will not assert, to the fullest extent under applicable law, its rights to these trademarks and trade names. The Company does not intend its use or display of other companies' trade names, trademarks or service marks to imply a relationship with, or endorsement or sponsorship of the Company by, any other companies.

kyverna™

Autoimmune diseases represent a large, under-served market

Autoimmune diseases prevalence high and increasing (80+ different diseases)

Autoimmune diseases affect 8% of people in the U.S.[1], with prevalence increasing YoY

Autoimmune disease large and growing market

Currently marketed products:

>$80B revenue[2] in 2021

Current treatments inadequate for patients long-term

Current therapies:

- Low rates of remission
- Serious long-term side effects

B Cell-Driven Diseases	Estimated Number of Diagnosed Patients in US + EU + Japan[3] as of 2022
Rheumatoid Arthritis	4,700,000
Multiple Sclerosis	1,520,000
Sjogren's disease	750,000
Systemic Lupus Erythematosus (SLE)	560,000
Systemic sclerosis	200,000
Lupus nephritis	160,000
Myasthenia gravis	160,000
Inflammatory myositis	120,000
ANCA-Associated Vasculitis	100,000
Neuromyelitis Optica	20,000
Total	**~8.3 Million Patients**

Note: [1] National Institutes of Health (NIH) Autoimmune Diseases Coordinating Committee. Progress in Autoimmune Diseases Research (Publication No. 05–5140). kyverna™

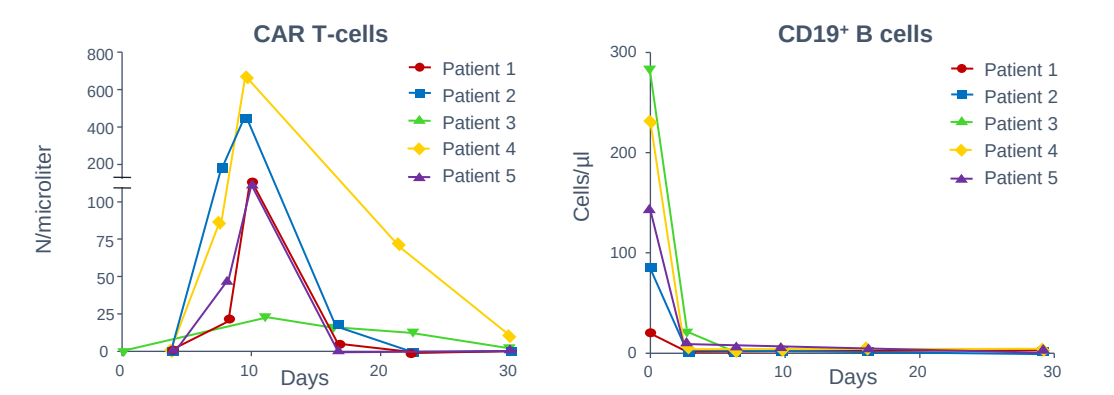
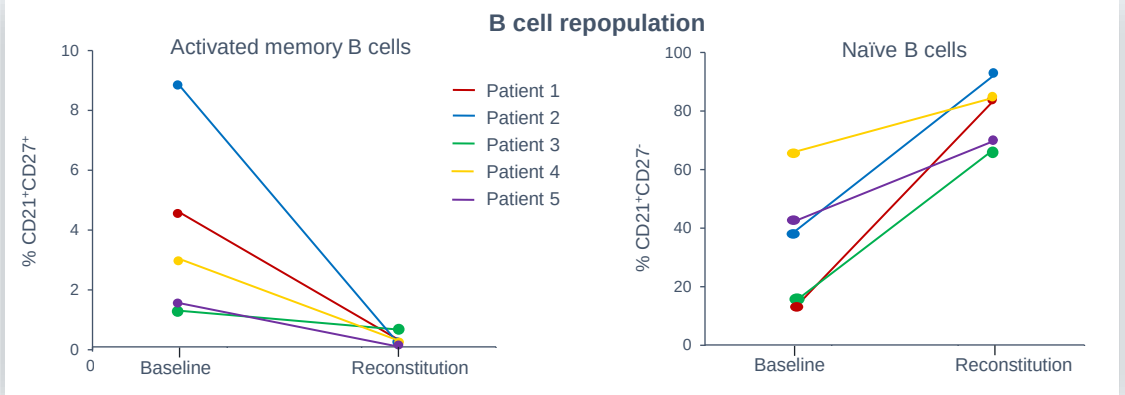
Clinical support for CAR T use in autoimmune patients

Based on third party academic data observed in SLE patients[1]

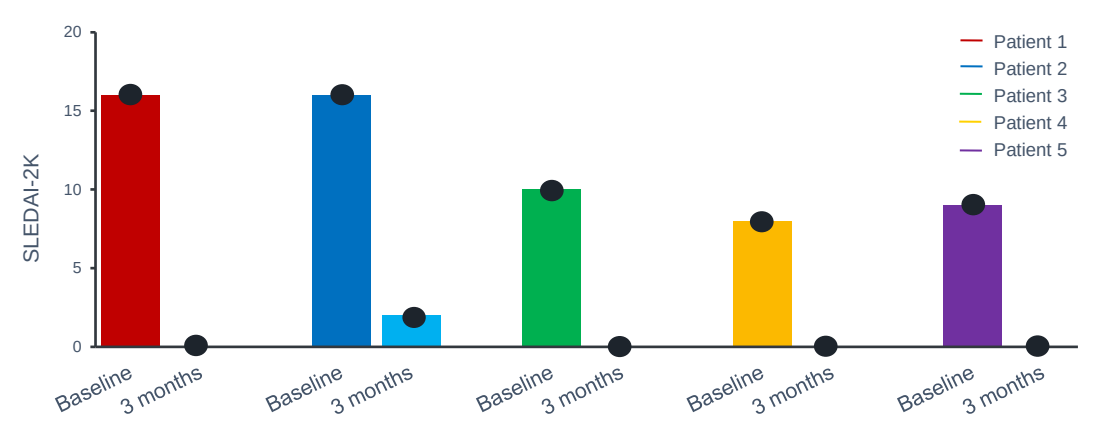
CAR T observed to expand *in vivo*, with deep depletion of B cells…



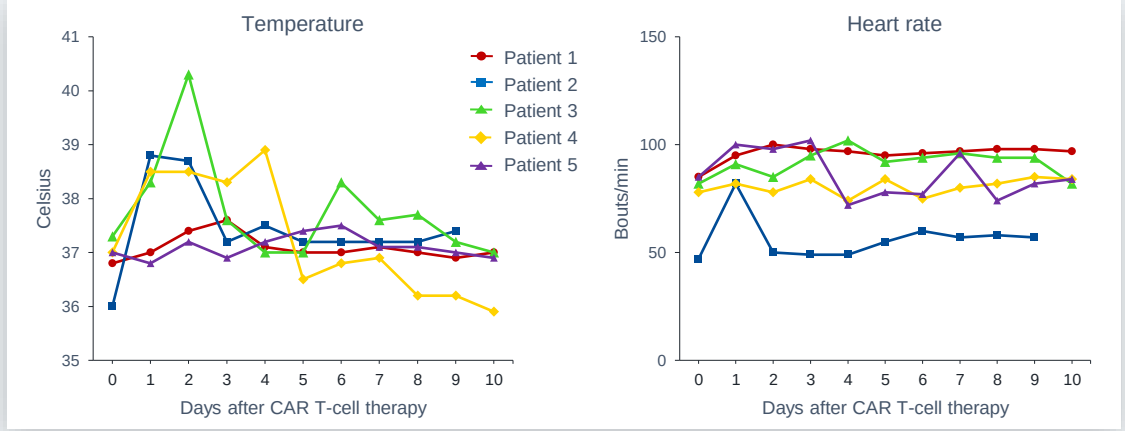
Drug-free remission was maintained during longer follow ups, even after the reappearance of naïve B cells



…with 100% remission observed based on SLE disease activity index after 3 months



…while being well-tolerated for 10 days post-treatment based on CRS symptoms[2]



Note: Mackensen et al., Nature Medicine 2022; 28: 2124-2132; [1] Lupus nephritis commonly develops in patients with SLE; [2] Cytokine release syndrome is generally measured using criteria defined by Lee DW, et al. Biol Blood Marrow Transplant. 2019;25:625-638

kyverna

KYV-101

- Autologous CD19 CAR T

kyverna™

KYV-101 – CD19 CAR T-cell therapy for autoimmunity

Goal: Durable clinical response & withdrawal of immunosuppressive medications

KYV-101: Aim to be next generation treatment option

- Direct depletion of pathological B cells

KYV-101: Potential for differentiated therapeutic profile

- Clinical support for therapeutic activity
- Reduced immunogenicity (fully human)
- Potentially reset disease-contributing B cells with a single treatment

KYV-101: Track record of favorable safety in multiple settings to date

- Designed to reduce levels of cytokine release
- Reduced neurotoxicity and CRS observed in oncology trial
- Expected to avoid standard-of-care toxicities

Note: CRS = cytokine release syndrome

kyverna™

A Diverse Set of Indications Across Neurology and Rheumatology

Note: LN, lupus nephritis; SSc, systemic sclerosis; MG, myasthenia gravis; MS, multiple sclerosis; SPS, stiff person syndrome; LEMS, Lambert-Eaton myasthenic syndrome; AIE, anti-DAGLA autoimmune encephalitis

kyverna

Early KYV-101 CAR-related safety data consistent with other CAR T-cell therapies across autoimmune and oncology indications

Source	Indication	N	Any Grade CRS	Any Grade ICANS[a]	CRS Grade ≥3	ICANS Grade ≥3
KYV-101 experience[1]	**Rheum & Neuro**	**20**	**17**	**1**	**0**	**0**
Schett Group case series[2]	SLE, IIM, SSc	15	9	1	**0**	0
Hu19-NIH Ph1 Lymphoma study[3]	DLBCL, FL, BL, MCL	20	18	NR[d]	2	1
ZUMA-1 (axi-cel)[4]	DLBCL 3L	101	94	65	13	28
TRANSCEND (liso-cel)[5]	DLBCL 3L	268	122	95	11	32[b]
JULIET (tisa-cel)[6]	DLBCL 3L	115	85	69	26[c]	22

- CAR T-cell therapies are associated with class effects, including CRS and ICANS, which may be potentially serious or life-threatening, but generally resolve within the first month of treatment and are manageable with close monitoring by a treating physician

(1) Internal data from KYSA-1, KYSA-3, and investigator-reported named patient experience with 28-day follow up as of March 31, 2024. (2) Muller et al., NEJM, 2024. (a) References 3-6 are reported as neurological toxicities. (b) reported at 12% of 268 patients. (c) reported as 23% of 115 patients. Sources: (3) Brudno, et al, Nature Medicine, 2020, (4) Neelapu S.S., et al, NEJM, 2017, (5) BREYANZI prescribing information, (6) KYMRIAH prescribing information; Abbreviations: MG, myasthenia gravis; LN, lupus nephritis; MS, multiple sclerosis; SPS, stiff person syndrome; DE, anti-DAGLA autoimmune encephalitis; SSc, systemic sclerosis; IgG4RD, IgG4 related disease; DLBCL, diffuse large B-cell lymphoma; FL, follicular lymphoma; BL, Burkitt's lymphomal MCL, mantle cell lymphoma; SLE, systemic lupus erythematosus; IIM, idiopathic inflammatory myopathies; CRS, cytokine release syndrome; ICANS, immune effector cell-associated neurotoxicity syndrome; NR, not reported, (d) Grade 1 neurological AEs were not recorded in this trial. Three subjects had Grade 2 ICANS, and 16 patients had Grade <2 ICANS. These limited observations are derived from separate clinical settings, and with respect to the autoimmune data are based primarily on information from case reports rather than clinical trials. They do not represent head-to-head comparisons of CD19 CAR T-cell treatment in autoimmune indications as compared to oncology indications. Future clinical trials may not confirm the clinical safety observations discussed in these case reports and studies.

kyverna™

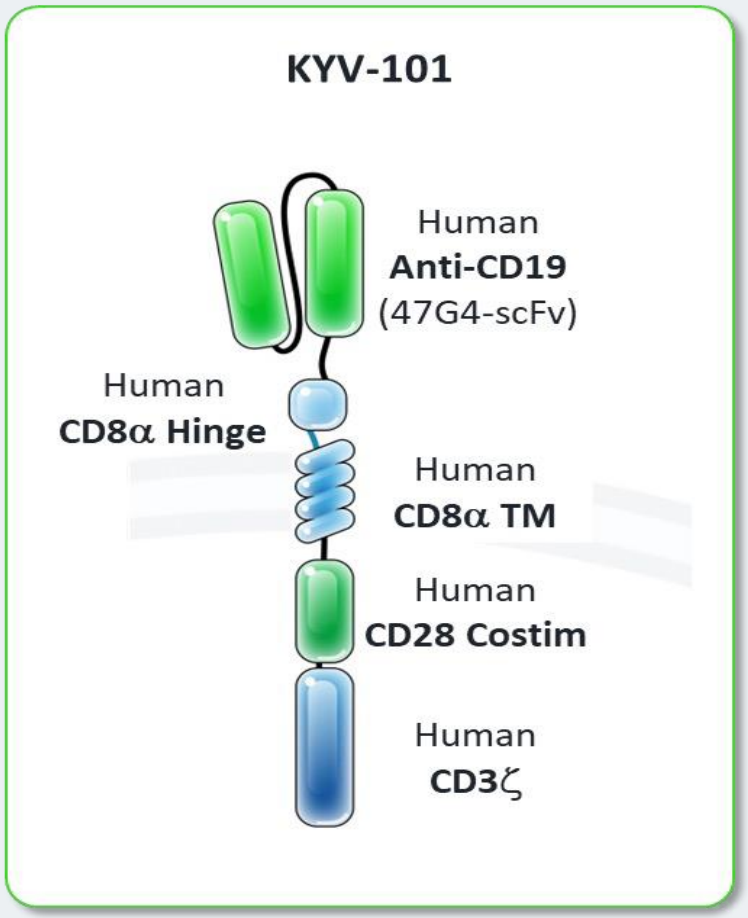
KYV-101 is an autologous CD19 CAR T with a favorable safety profile observed in oncology setting

Believed to have properties appropriate for use in autoimmune diseases



Engineered for improved safety profile[1]

- Developed at the NIH to improve upon axicabtagene ciloleucel (YESCARTA®)
- Structurally distinct in key aspects
  - Fully human single-chain fragment variable compared with murine
  - CD8α hinge and TM domains compared with CD28 hinge and TM domains

Design validated by clinical improvement observed in oncology setting[2]

- 20 patients with B cell lymphoma treated in Phase 1 trial by NIH
- Similar CAR T-cell expansion and clinical efficacy to YESCARTA® construct
- Improved safety profile observed relative to YESCARTA® construct
  - Lower levels of cytokine release, lower levels of clinical toxicity (e.g., neurotoxicity)
  - Lower immunogenicity

Program underway with NIH to generate in vivo data

KYV-201

- Allogeneic CD19 CAR T

kyverna™

KYV-201 is a potential best-in-class allogeneic CD19 CAR T cell therapy for B cell-driven autoimmune diseases

kyverna

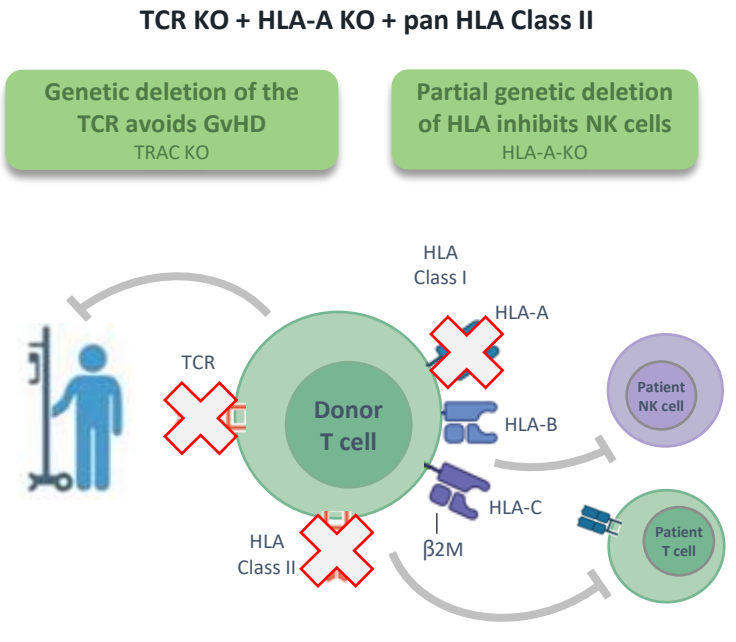
- **Potential novel CD19 CAR with clinical experience – utilizing same CAR as KYV-101**
  - Desirable CAR for B cell-driven autoimmune indications
- **Deep expertise in autoimmune disease**
  - Seasoned clinical development team with autoimmune disease experts and immunologists
- **Cell therapy development expertise**
  - Research, technical operations, clinical operations all led by experts in cell therapy

Intellia THERAPEUTICS

- **A leader in clinical applications of gene editing**
  - Recognized innovator in bringing solutions to patients; one of the first *in vivo* gene edited products in clinic
- **A leading allogeneic platform**
  - Platform designed to address limitations of autologous treatment manufacturing process
  - Proprietary approach enabled by lipid technology
- **Substantial genomics and analytical capabilities**
  - Demonstrated capabilities to screen and select ideal guides to ensure safety

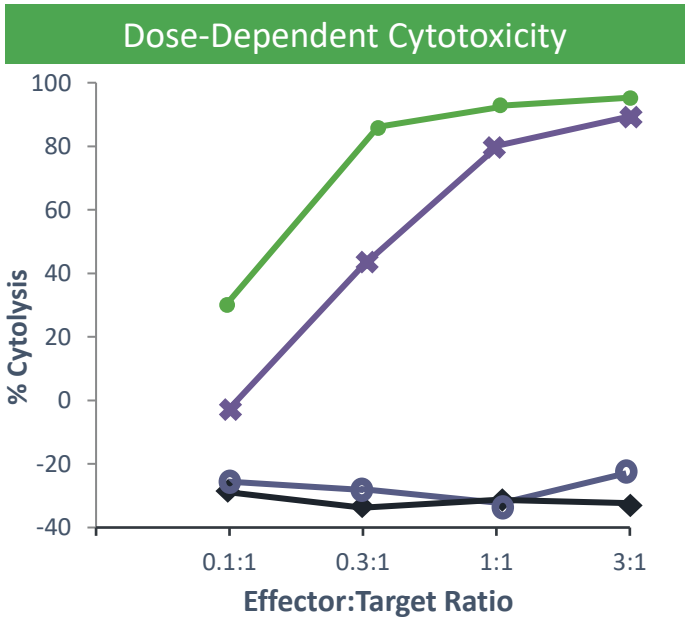
KYV-201 protection from T cells supports potential for longer-term persistence

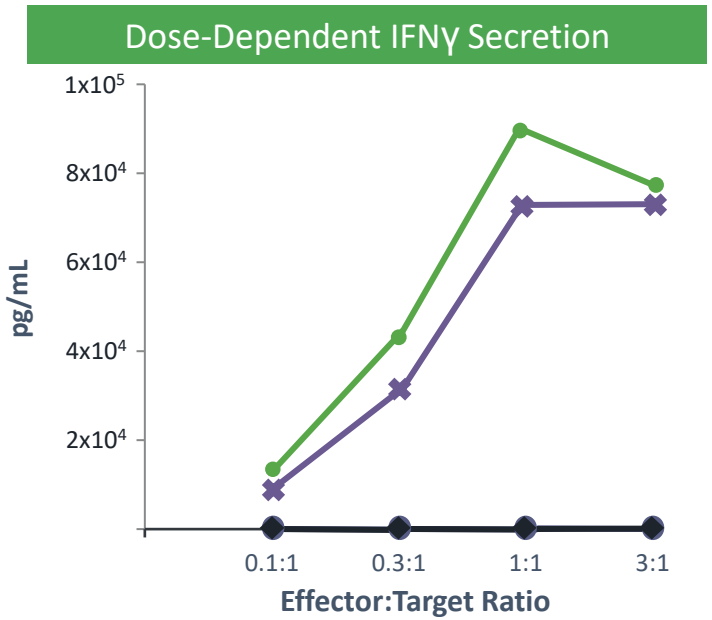
Differentiated allogeneic platform based 3 genetic deletions



KYV-201 demonstrates robust CAR-mediated activity against CD19+ cells

Similar to HLA Class I deficient b2M KO[1]





24h incubation with NALMS target cells
Representative of 3 donors
WT = Mock (unedited), untransducted
KO only = HLA-A / CIITA / TRAC KO
CAR only = CAR LV
KYV-201 = HLA-A / CIITA / TRAC KO + CAR LV
